Table 1: Job Callback Regression	
	CallBack
Elite School Candidate	.14*** (.032)
Recruiter is White	.035 (.033)
Recruiter is Male	.071 (.043)
Male Candidate	-.044 (.032)
Big Company Candidate	.09*** (.032)
Constant	.53*** (.037)
R-squared	0.0370
Number of observations	864
<i>Notes</i> *** p<0.01, ** p<0.05, * p<0.1.	

Table Description: We can see that a candidate going to an elite school is a significant positive predictor of whether or not he/she will get a job callback. We can also see that working at a big company is also a statistically significant positive predictor of whether or not a candidate gets a job callback.
